The robot has not returned to the docking station although I pressed the HOME button. What can I do?

Sara - 2023-08-25 - Problem solving

Make sure that the docking station was set up correctly and with sufficient clearance. Place the robot in front of the docking station at a distance of 30 to 50 cm and press the HOME button or manually place the robot on the docking station. If the robot has been positioned correctly on the dock, you will hear a short beep.
